Emerging Trends in Periodontics

Course Outline

With the new millennium, periodontal program therapies are being introduced to dental professionals at a rapid pace. This course will provide a comprehensive in depth view on the past, current and future concepts of periodontal disease. Information will include the history of periodontal disease and treatment from a historical perspective to current philosophies about the assessment and treatment of periodontal diseases including the link between systemic disease and oral disease. Participants will learn how to incorporate new technologies into everyday practice including the use of instruments and equipment, local delivery products and host modulation drugs. The attendees will receive information that will allow them to discuss non-surgical therapy, supportive periodontal therapy and surgery.

Learning Outcomes

At the end of the program, participants will have learned to:

- contrast and compare current and future concepts of periodontal disease.

- incorporate new technologies into every practice, including the use of instruments and equipment, local delivery products, and host modulation drugs.

- understand and describe periodontal medical interrelationships
